PROFILE

Full-Stack Developer with hands-on experience building end-to-end web applications using .NET (C#) and Angular. I apply Clean Architecture and SOLID principles across the stack RESTful APIs with ASP.NET Core, SPA interfaces with Angular, and SQL Server / MongoDB for persistence. Looking for an entry-level Full-Stack position to contribute alongside a skilled engineering team.

TECHNICAL SKILLS

- **Languages:** C#, TypeScript, SQL, NoSQL
- **Frameworks:** ASP.NET Core, Entity Framework, Angular (v12+)
- **Databases:** SQL Server, MongoDB
- **Web Technologies:** REST APIs, HTML5, CSS, Bootstrap
- **DevOps & Tools:** Git, Docker, Swagger, Postman
- **OS & Infrastructure:** Virtual Machines (VMware, VirtualBox, UTM), Windows, Linux, macOS
- **AI & LLM Technologies:** Ollama, Local LLMs, CLI AI Integration, LLM Architecture Concepts

EDUCATION

Bachelor's Degree in Automation and Applied Informatics | 2020 – 2024

University of Oradea, Faculty of Electrical Engineering and Information Technology

LANGUAGES

Romanian: C2 English: B2

PROFESSIONAL EXPERIENCE

FinProm S.R.L. | Financial & Commercial Operations Associate | 2021 - present

- Administered and optimized departmental Virtual Machines, ensuring high availability and smooth daily operations.
- Diagnosed and resolved complex network issues, specifically focusing on VPN and remote VM access bugs.
- Managed the end-to-end provisioning of IT equipment, maintaining the inventory of laptops and office peripherals.

PERSONAL PROJECTS

Somo | Full-Stack Developer (.NET, Angular, MongoDB) 2025 – Present *(In Development)*

- Built a veterinary clinic finder platform — Angular SPA + ASP.NET Core + MongoDB — enabling pet owners to locate nearby clinics via Google Maps geolocation and book appointments through a 6-step guided flow.
 - Implemented Clean Architecture with strict separation across 4 layers (Domain, Application, Infrastructure, API), keeping business logic fully isolated from infrastructure concerns.
 - Applied Generic Repository Pattern and dedicated DTOs for Vets, Clinics, Pets, and Appointments — decoupling the internal domain model from the API contract.
 - Secured the platform with JWT-based authentication and role-based authorization (Owner / Vet / ClinicAdmin) controlling access across all endpoints.
 - Integrated MongoDB via a custom MongoRepository for flexible storage of complex medical documents.
-

Device Management System | Full-Stack Developer (.NET, Angular, MongoDB) 2026

- Built a device inventory management platform — Angular SPA + ASP.NET Core + MongoDB — with full CRUD, JWT authentication, role-based access control, and device assignment per user.
 - Integrated an AI-powered description generator using Ollama (gemma2:2b) to automatically generate human-readable device descriptions from technical specifications.
 - Implemented a free-text search engine with relevance ranking, scoring matches across Name, Manufacturer, Processor, and RAM fields without external search libraries.
-

MeigoWeb | Full-Stack Developer (.NET, Angular, SQL Server) 2024 – 2025

- Built a full-stack e-commerce platform for clothing retail — Angular + ASP.NET Core + SQL Server — supporting product browsing, cart management, and order placement across mobile, tablet, and desktop.
 - Implemented role-based access control (Customer / Admin) using IdentityServer 8 and JWT tokens, with hashed passwords and fully separated route guards preventing unauthorized access to the admin panel.
 - Developed a comprehensive admin dashboard covering inventory management (add, edit, delete products), order history tracking, and a monthly sales chart with calendar-based reporting.
 - Enabled customers to manage their profile (delivery address, contact details) and shopping cart (product quantities, item removal) through a responsive, intuitive UI.
-

Wing Tsun Connect | Frontend Developer (Angular) 2026

- Developed a responsive showcase website for a martial arts academy — Angular SPA deployed to production via Netlify with GitHub-integrated CI/CD for automatic updates on every commit.
- Built modular, reusable Angular components ensuring a consistent visual identity and a fluid single-page experience across all devices
